Invest Sign Features

Budgeting and Planning

Track the project budgeting process from budget creation to project completion. Throughout a project's duration, compare budgets against actual and measure accuracy to ensure the project remains profitable and progresses as planned.

Easy to adjust to Project

It is more easy to adjust Invest Sign 2.36 to project type (or enterprise if you are preparing business plan or want to make decisions related with enterprise), estimated lifetime, project condition, market requirements and country tax policy.

Manage Multiple Project Types

Invest Sign allows quickly describe costs, income, funds of sources and focus on project. The program manages multiple types of project including time and materials, fixed price and cost plus projects. In general, describing project (or enterprise business plan) with Invest Sign can encompass these steps:

Adjusting Invest Sign to Project or Enterprise requirements

Ability to describe investment

Ability to describe operational activity

Ability to choose and optimize needed funds

Multiple Forecasts

You have visibility into multiple forecasts, such as calculated, upside case, base case, downside case, and override, enabling you to easily, accurately triangulate forecasts.

Services and Product Catalogue

Invest Sign services and products catalogue lets you organize your portfolio of service and product offerings, facilitating the sales process. As prospects move to preferred clients, you can provide standard pricing to target segments and personalized pricing for recurring and contracted services. The Catalogue also manages discounting rules for accounts contracting volume or multiple services.

Integrated Commissions

Invest Sign offers commissions tracking, which are critical for motivating sales teams through real-time visibility, reduced errors, and accurate, timely payment. Managed in-system, integrated commissions reduce overhead in sales operations, and eliminate shadow tracking by sales representatives.

Project Costing and Returns

Forecasting the future cost and revenue of projects provides essential benchmarking for developing bids, requesting budgets and tracking project progress. Forecasts can be created for any number of future projects. Using Invest Sign, forecasts can be adjusted to account for capacity and skill issues. In addition, estimates can be generated without assigning real resources and virtual resources can be used to produce a role-specific forecast.

Manage projected Costs and Returns

Get accurate, up-to-date information throughout your Invest Sign, with direct integration of receivables, payables, inventory control, revenues and other accounting functions. Describe expenses whose direct costs are recorded elsewhere, such as equipment usage or copying services, so you know how much projects cost in relation to their revenue.

Set up complex estimates

Set up complex estimates by specifying the quantity (e.g., hours), unit cost, and billing rate (for time-and-materials projects) for each staff member, material, subcontractor, equipment, miscellaneous item, and overhead expense allocated to the project. Assign cost categories and automatically calculate cost, revenue estimates per cost category, or simply define the cost and revenue estimates for each product or services category.

Financial Analytics

Financial accounts and other summarized data table's analysis

Invest Sign gives opportunity to analyze all three general financial accounts: Profit and Loss, Cash flow, Balance sheets. There is additional sheet sometimes needed for different cash flow analysis of the project - Cash flow sheet (2). These sheets are supported with different summary data tables and make financial accounts analysis more complex and blanket.

Perform detailed financial analysis

Using Invest Sign you can perform detailed financial and economic analysis, and export financial tables and other summarized data to your reports to support your decision. Invest Sign is structured to give opportunity to execute these types of analysis:

Financial Ratio analysis

Invest Sign calculates financial ratios and you can compare them against each other or comparable industry averages for the same time period. It will provide an insight into the project's (or business) financial condition and operational performance. In Invest Sign, financial ratios are categorized for detailed analysis into these sections: **Liquidity ratios, Activity ratios, Gearing ratios, Profitability ratios.**

Economic analysis of alternatives

With Invest Sign you can easy check various alternatives, view results as evaluation methods (NPV, IRR, PB and others), financial ratios, and choose the best one which the most increases the project (or enterprise) value.

Optimization of working capital and alternatives execution of funds

With Invest Sign you can easily estimate and optimize the need of working capital both for base variant of your project and for alternatives. You can choose various types of financial means for project, for example: have only your sources or obtain some

equipment with leasing and take some commercial loans, and choose the best one which the most increases project value.

Risk management

Perform detailed Risk analysis

Four Invest Sign techniques are presented to illustrate common modeling situations under uncertainty. To help you understand the modeling techniques employed, example Invest Sign simulations are provided with your Invest Sign program. The simulations are even "pre-run" so you can just look at the results if you like. As you work through each modeling technique discussed, look at the corresponding table. It will help you understand the Invest Sign concepts and techniques involved in modeling each risky situation.

Project Valuation methods

In Invest Sign, there are all four major methods of evaluating investment proposals: Net present value (NPV) method, internal rate of return (IRR) method,

Payback period (PB) method, Profitability index (PI). Additionally three methods are supported for advanced analysis: Modified Internal Rate of Return (MIRR), Discounted Payback period (DPB), Accounting rate of return (ARR).

Sensitivity Analysis

A Sensitivity Simulation in Invest Sign allows quickly and easily to see the impact of uncertain project key variables on project results - offering a powerful analysis technique for selecting between available

alternatives. The results can be easily exported to reports or reviewed in data tables and panels.

Scenario and Stress Analysis

Business managers and decision-makers can examine multiple scenarios, fine-tuning assumptions about projected resource usage, performance and milestones. Invest Sign provides the ability to take a live plan off-line, adjust it to reflect new business priorities and review the impact across the whole organisation and compare results. The result: any guesswork is taken out of the budgeting, planning and resourcing processes. Organisations can quickly react to changes and see these changes as part of the whole corporate perspective.

Monte Carlo Sampling

Invest Sign gives abilities to perform the last stage Risk analysis and let you to see all possible outcomes using a technique known as Monte Carlo simulation. The information you can get from your project financial model becomes tremendously more accurate, and infinitely more valuable.

Reporting and Assimilate

With Invest Sign software companies finally have the level of customization in their financial and revenue management reporting that they require. Invest Sign reports allow easy customization, enabling companies to view financial data according to the precise criteria they set. Invest Sign reporting software come with a host of standardized reports and it also enables to customize easy them.
